## TECHNICAL DATA

|                        |                                                                                                  |
|------------------------|--------------------------------------------------------------------------------------------------|
| Dispersion             | dry                                                                                              |
| Measuring range        | 0.1 - 2100 $\mu\text{m}$                                                                         |
| Sample volume          | 1 - 100 $\text{cm}^3$                                                                            |
| Sample feeding         | high-frequency feeder                                                                            |
| Sample exhaust         | external exhaust system required                                                                 |
| Typical measuring time | 5 - 10 s (measurement value recording of a single measurement)<br>2 min (entire measuring cycle) |
| Voltage                | 100-120 / 200-240 V/1~                                                                           |
| Frequency              | 50-60 Hz                                                                                         |
| Input power            | 50 Watt                                                                                          |
| Dimensions (W x D x H) | 36 x 65 x 37 cm                                                                                  |
| Weight                 | 24.6 kg                                                                                          |

## SUITABLE FOR THE FOLLOWING MEASUREMENTS

Dry measurement of agglomerates of dry powder and free-flowing, coarse-grained materials without dispersion and compressed air.

## ISO 13320

TECHNICAL SPECIFICATIONS ACCORDING TO ISO 13320
